

COMPLETE DRIVESHAFT REPLACEMENT

We offer a complete line of replacement drive shafts

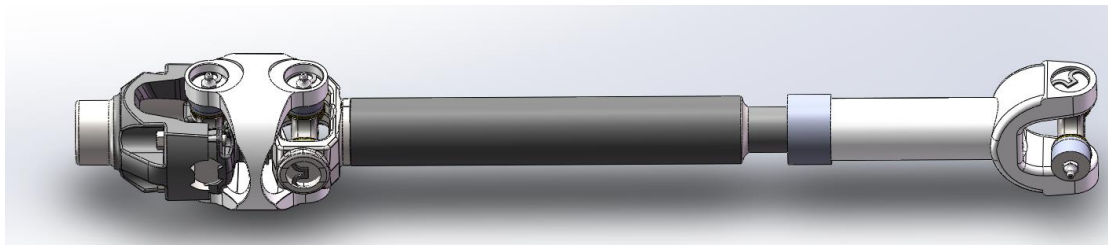

Professional quality drive shafts ready to ship for American, European, Japanese and Domestic vehicles with FREE SHIPPING.

Most of our driveshaft applications fit cars that originally came with a non-replaceable/staked universal joint. If you are looking for a replacement drive shaft for vehicles such as JEEP, VOLVO, SUBARU, HONDA or other makes of cars and trucks where the U-Joint replacement is not possible except by a drive shaft manufacturer, then we can help.

Some of our propeller shafts are BRAND NEW, and some are completely remanufactured from the ground up. These drivelines get new U-Joints, center support, bearing and shaft bushing as well as a CV joint replacement for driveshafts with front or rear CV joints, such as some BMW, Audi, Mercedes and VW vehicles.

All our propeller shafts are built with the highest quality materials

Our driveline products go through rigorous inspection, testing and computer balancing at 3,500 RPM. Unlike some builders who spin their drive shafts at 500 RPM, our high-speed balance is able to expose the slightest !!!! in play - as little as 0.002 of an inch. This provides the smoothest acceleration. The end result is a high quality product that meets or exceeds original equipment quality requirements.

Every driveshaft line is professionally built, painted with anti-corrosive paint and shipped in a secured long box. You will be amazed with the quality and the warranty - guaranteed!

Some of our drive shafts are brand new, and there is no core charge or need to return the old driveshaft. On any replacement drive shaft that is remanufactured, a core deposit is added to the purchase. Core Shipping Retrieval is paid by our company! A PREPAID UPS SHIPPING LABEL FOR THE CORE IS ENCLOSED WITH THE NEW DRIVESHAFT. Core credit is given within 15 business days after your old part arrives at our facility.

If we do not have your driveshaft in stock, we will email you a prepaid UPS shipping label so that it is easy for you to send the driveshaft to our facility. We'll rebuild your driveshaft in 24-48 hours and send it back to you ready to install.

If you are experiencing a vibration or a driveshaft noise with your car or truck, we can help. Buy your driveshaft from us and enjoy great quality, price, and warranty along with a smooth transaction.
